EXPERIENCE

GEO-LOCATION

"Geolocation is a powerful tool for pinpointing the exact physical location of users or devices through GPS, IP address, or cellular networks. Its applications include navigation, location-based marketing, and real-time tracking. With a keen interest in technology, I am eager to integrate geolocation solutions into interactive web applications."

VERIFICATION CODE

"Implemented a robust verification code system using JavaScript to enhance user authentication and security. The system generates unique six-digit codes, stores them temporarily in local storage, and verifies input against the stored code for accuracy. This solution improves user experience by ensuring a reliable and secure method for identity validation."

CAKE BAKERY

Responsive Design: The website is fully responsive, offering seamless navigation across devices using HTML, CSS, and Bootstrap.

Feature-Rich Pages: Includes pages like 'About Us,' 'Contact Us,' and 'Cakes,' showcasing detailed information and product highlights.

User Interaction: Features a contact form and interactive elements like buttons and modals to enhance user engagement.

Modern Aesthetics: Implements modern design principles with a clean layout, high-quality images, and smooth user experience.
